NextNav Petition – PNT proposal – Objection by Continental

Dear FCC Commissioners,

We, Continental Automotive Systems, Inc., One Continental Drive, Auburn Hills, Michigan, 48326, USA and Continental Automotive Technologies GmbH located in Siemensstrasse 12, 93055 Regensburg, Germany have reviewed the NextNav terrestrial positioning navigation timing proposal.

The NextNav proposal, if accepted, would have a **significant impact on millions of vehicle users**, who would not be able to access their vehicles, or use products, that have been on the market and purchased since 2013, and continue to be sold today. Alongside the consumer, companies that continue to produce products on the 902MHz - 928MHz band will be severely impacted.

The FCC should consider the impact for entire United States of America in case the lower 900MHz band would be reconfigured.

Yours sincerely,

Continental Automotive Systems Inc.
